## Robinson

HIGHEST QUALITY

These big round blunt-pointed berries are of top quality. They are borne on large, thick fruit stems that are protected with heavy foliage that makes up a wide fruiting and picking row.

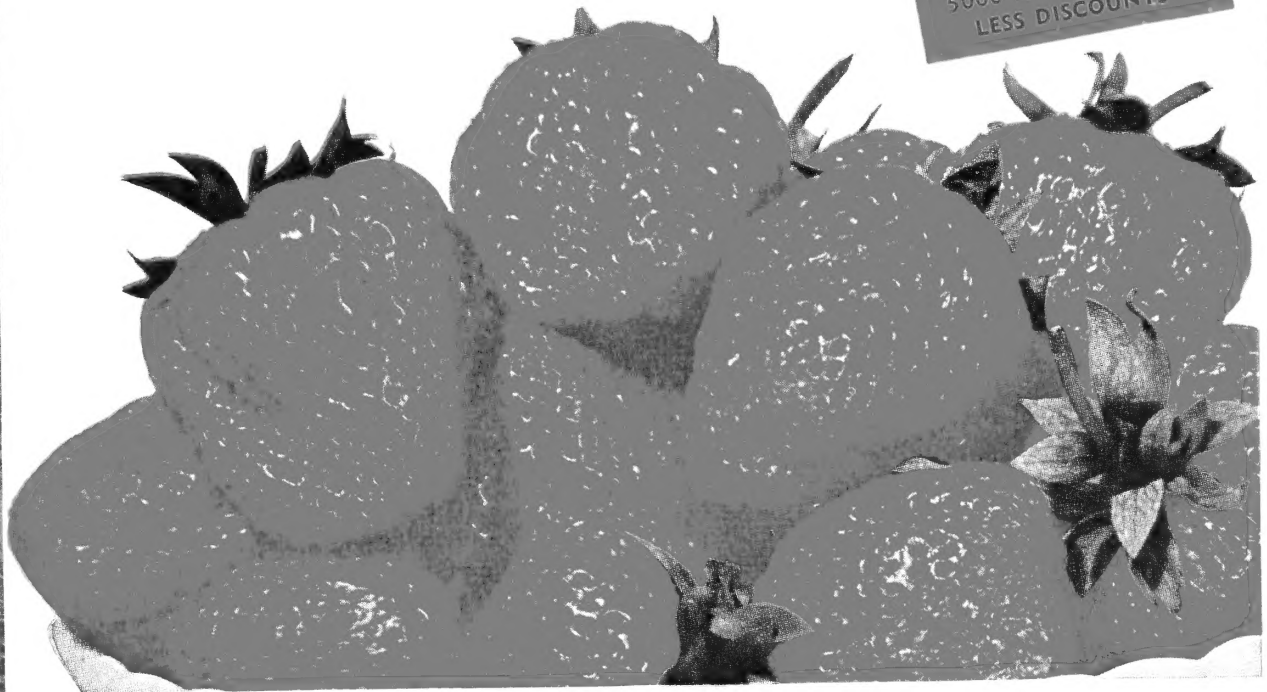

The tangy, rich, sweet flavor is found in no other Strawberry. ROBINSON is the largest berry we have to offer. It's late—starting to ripen about the time Premier is finishing up. By planting Premier for early and Robinson for late, you will have fresh fruit from start to finish, over a 30-day period. Berries have a firm skin, and are solid all the way through, making it a good shipper as well as a good home use variety. You will like Robinson.

The Most Famous Berry Ever Introduced

Premier Strawberries sold as high as \$11.50 per 16-qt. crate on Benton Harbor, Mich., Wholesale Fruit Market.

If you plant STROMER'S PREMIER you will get the first berries on the market. They will be bearing heavily before other varieties begin. ## POCAHONTAS

Introduced by the U. S. Dept. of Agriculture

This variety has been around about 5 years. Berries are bright red, of average size and as firm as the old variety called Blakemore. They are a little on the tart side. Keep, and freeze well. One of the heaviest producers. Some claim enormous yields. We would say—try a few and see how you like them.

## SENATOR DUNLAP

June Bearing Variety—Over 50 Years Old but Still Good

Senator Dunlap is an old well known variety that has made more rollars for berry growers than any other variety. It will grow most anywhere and on any kind of soil. However, it will do best on heavy, rich soil. If planted on light soil, be sure to set them 2 feet apart. On heavy soils set them 18 inches apart. Berries are dark red, firm and sweet. Wonderful for canning and freezing as well as fresh.

These SURPLUS plants might be everbearing or June-bearing varieties, but in every case they will be of the same kinds that we list in this catalog. First class in every way except that they will not be labeled. Supply of course is limited so get your order for these in early.

This variety was introduced several years ago by the New York Experimental Station. Catskill and Robinson are two of the finest late Strawberries. They follow Premier and Dunlap. Berries are extra large and smooth. The last ones that you pick from the thick, stiff fruit stems that stand upright with a full load, will be nearly as large as the first ones, and just as smooth. We do not have a more beautiful berry to offer. Mild and nearly non-acid. Folks who are bothered with Strawberry rash tell us they can eat Catskill. Catskill will do fine on any type soil, but does the very best on a heavy clay loam, and fine on a stiff clay soil.

In this mixture there are many colors of the best and newest kinds in every color they come in. ## MASTODON EVERBEARING

Bears 60 Days  
After Planting

Mastodon has been with us for about 20 years, we have never known them to fail on a full crop five months long. The very large berry is of good quality, red all the way through, and fine flavor. Bears heavily and makes many new runner plants. These new runner plants will also bear toward fall, and then you have a real picking row. This wide row will make fine picking next June as a spring berry. Mastodon does not require any special soil, care or petting. It will take a hard freeze to stop Mastodon from bearing. A field of Mastodon in full bearing in late November is a sight never to be forgotten. Even after a light snow one can go out and find ripe berries unharmed.

### THE EXTRA EARLY BLACK RASPBERRY

This new Black Raspberry was introduced by us 3 years ago. It's a chance seedling since it was found growing wild. It was taken up and cultivated because we noticed that the berries were ripe and ready 2 weeks before any other variety, so that is the outstanding feature of MORTGAGE LIFTER. Berries are medium large, sweet as honey, and firm. If you plant only a few in your garden you will have the first ripe berries in your neighborhood. If you plant them for market, then you will really "clean up," since it's always the first ones ripe that make the money. It's a real mortgage lifter.

EARLY RED has proved its superiority after 10 years of testing and growing on a commercial scale. It now takes its place as the most outstanding early Red Raspberry yet produced. Originated by Stanley Johnston of the South Haven, Mich., Experiment Station, EARLY RED is a cross between Lloyd George and Cuthbert varieties.

Plants yield enormous crops. For a profitable commercial crop, and for home gardens too, there is none better than EARLY RED. Try a planting this spring. **Prices same as Latham.**

## WASHINGTON ASPARAGUS

Growers everywhere are discarding all other varieties in favor of Mary Washington, because it is earliest, the stalks are larger, more tender, more productive than any other variety.

# GIANT CULTIVATED BLUEBERRIES

**EASY TO GROW.** Each year as we learn more and more about growing the **HYBRID** cultivated Blueberries, we find that they are not near as fussy about what kind of soil they will grow on, as we did a few years ago. Of course they prefer a rather moist acid soil, but we also find that they will grow on other soil too, by adding some peat moss, old leaves or sawdust with the soil. Sulphur and water them well during dry spells.

The Cultivated Blueberry is a rather **DWARF** growing plant. A plant 15 years old will not be over 6 feet tall, but it will be the same size in circumference. They grow in a ball shape plant, and their roots are all very near the top of the soil, so they must be cultivated very shallow. Set the plants 5 feet apart each way, and keep clean by frequent cultivation. Hoe all weeds away from the plants.

We offer 4-yr. and 5-year-old plants. Both of these sizes have some buds. You can expect 2 to 6 quarts of fruit from a 5-year-old plant the year after set, when it becomes well established. Even the 3-year-old plants will bear some fruit the same year set. Jersey is the best all around Blueberry.

### BLUE HYDRANGEA

We offer a new variety, Nikko Blue, which all summer has immense flower heads, often a foot across, that last for many weeks. In ordinary soil the flowers are pink. In acid soil, they are blue. You can make your soil acid by mixing in one half Peat Moss. Does best in partial or full shade, even on north side of house. Grows only 3 to 4 feet tall, making a well rounded shrub just as wide. A group of 2 or 3 will enhance the beauty of a picture window in your home. A rare plant of exquisite beauty, which will produce a fine crop of glorious blue flowers measuring 6 to 10 inches across. A few old rusty nails in the hole as you plant will assure them to bloom blue and stay blue. Or a teaspoon of aluminum sulphate will do the trick also. 2-year-old, field-grown plants, \$1.50 each; 2 for \$2.75. **LESS DISCOUNTS.**
